Cloudflare

Remote, OR.

Respected Hiring Manager,

It is with great professional enthusiasm that I approach Cloudflare with the goal of exploring opportunities such as Data Analyst Intern. With pursuit of a Masters in Management Information Systems from Stevens Institute of Technology and expected graduation in May 2022 and a GPA of 3.89, I am eager to learn and align my skill set with any position that requires a proactive individual who strives to exceed expectations on every assignment.

My resume is enclosed for your review; highlights include:

- Developed an analysis model to track the regrowth of a brain tumor based on its physical characteristics using Pandas and NumPy packages of Python on Jupyter Notebook.
- Developed an appointment SaaS using PostgreSQL, Express and Node along with AWS' EC2 Compute Engine and S3 storage to promote social distancing and help reduce crowds at local marts during the pandemic.
- Worked as a Business and Web Development Intern at Cmykantic Marketing Pvt Ltd for the Digital Marketing Team learning and implementing technologies like HTML, CSS, Handlebars and Node.js with testing in CI/CD using Trello.
- Constructed a rover with the ability to maneuver in remote places and capture precise and low-angle photos and videos for cinematographers using HTML, CSS, Handlebars, Python, OpenCV and Node.js.

In addition, I have experience with Business Intelligence, Agile Methodology, Kanban Board, Data Warehousing, Machine Learning and Web Programming due to the courses taken and academic projects completed this semester. I possess outstanding time-management skills and work well in team-driven environments. You will find me to be a highly productive individual, quick to grasp essential procedures and protocols, and possessing the stamina to do whatever it takes to complete the task set before me.

Should these characteristics and a solid work ethic be a good fit with your company, I would look forward to an opportunity to discuss my qualifications in detail. Until then, thank you for your time and consideration.

Sincerely,
Deep Rane
